

Press Release

Extensive Range of JDSU Helium Neon lasers available on-line from Photonic Solutions.

Edinburgh, 16 September 2008:

Photonic Solutions have significantly expanded the range of JDSU helium neon lasers that they hold in stock and which are available for purchase on-line from their webshop at <http://www.photonicshop.co.uk>, with next day delivery offered on all in-stock items. The range of available JDSU HeNe's has power outputs from 0.5mW to 22.5mW at 632.8nm wavelength. Along with the

HeNe laser heads, there is also a wide range of power supplies in stock, including 12VDC and 220VAC OEM modules as well as the 1200 series of laboratory power supplies with emission indicator and key switch.

JDSU has long set industry standards for gas laser performance and reliability and all JDSU HeNe lasers feature their patented close-cathode design that rapidly and uniformly distributes discharge heat throughout the laser, resulting in excellent thermal, beam-pointing, and power stability. These low noise, high power, and long life HeNe lasers are manufactured in a dedicated gas laser manufacturing facility and have been designed for the most demanding applications in areas such as flow cytometry, metrology, semiconductor inspection, laser induced fluorescence, alignment and high-speed printing.

Photonic Solutions is the UK distributor of the JDSU range of commercial laser products. JDSU has a diverse portfolio of diode, fibre and gas lasers, together with CW and pulsed solid state lasers. Please contact us for information on the full range JDSU lasers available from Photonic Solutions.
