Press Release

Photonic Solutions Ltd strengthen relationship with Light Conversion Ltd

Edinburgh, 07 September 2011

From 1st September 2011 Photonic Solutions Ltd (UK) announce they will be handling the Light Conversion Ltd (Lithuania) PHAROS and ORPHEUS

ultrafast laser systems in the UK and Ireland. These femtosecond lasers are designed for industrial and scientific applications and are recognised as technology leaders.

This new agreement between the two parties strengthens an already existing long term relationship between Photonic Solutions and Light Conversion based on sales of Light Conversion's original ultrafast product - the TOPAS, tunable fs/ps OPA in the UK and Ireland over the past 10 years.

Established in 1994, as a spin-off from Vilnius University Laser Research Center, Light Conversion is a private company now employing more than 70. The company is based in Vilnius, the capital of Lithuania, and has built its reputation on ultrafast laser expertise.

The PHAROS is an all-new, rugged, industrial design of femtosecond laser aimed at both industrial and scientific customers. Primary applications are in material processing and micromachining, but coupled with ORPHEUS, its dedicated wavelength tunable parametric amplifier, the PHAROS systems become a powerful scientific tool for ultrafast spectroscopy applications. ~ENDS~
